

A close-up photograph of a person's hands, wearing a white lab coat, holding a small, clear contact lens in the left hand and a white contact lens case in the right hand. The background is blurred, showing a dark blue garment.

## #Stayhome

During the pandemic, Avizor would like to let you know that the use of contact lenses is safe and that there is no evidence suggesting a higher risk of infection or contracting COVID-19 while using contact lenses.

Nevertheless, it is important to take precautions while cleaning your lenses. It is essential to wash your hands with soap and water for 40 seconds before and after handling your lenses.

It is important to correctly disinfect your contact lenses after each use. 3% hydrogen peroxide is one of the most efficient systems of disinfection. Follow the manufacturer's instructions. Disinfect your lens case daily and replace it every month with a new one.
